

PCM DELASCO

Peristaltic pumps DL Series

Keep it
moving

PCM Pumps' DL Series: the rollers and hose-guides work smoothly together.

The DL Series

comprises 6 models:

DL 12, DL 18, DL 25, DL 35, DL 45 and DL 55.

These pumps are equipped with a reinforced hose, rollers and hose-guides. The combination of rollers and hose-guides reduces the mechanical stress on the hose. The working life of the hose is increased through the combination of rollers and hose-guides.

Benefits

Of peristaltic technology

- Self-priming
- Can be run dry
- Design sealless
- Rapid, economic maintenance
- Reversible
- Dosing

Of experienced designing

- Versatile
(varied applications and products)
- Does not alter pumped product

Characteristics

- Minimum flow-rate: 44 l/h
- Maximum flow-rate: 20 m³/h
- Maximum pressure: 15 bar
- Maximum temperature in continuous operation: 90°C
- Cylinder capacity: 63 to 1700 cm³
- Self-priming: 9 m W.C.
- Speed: 5 to 133 rpm
- Reversible pump
- Hose reinforced by synthetic braid

Operation

1. Induction

2. Transfer

3. Discharge

Construction

DL Series

12.18.25.35.45.55

Relief-valve plug

Technopolymer

- ▶ Overpressure safety inside pump housing.

Steel hose-guide

E 24 steel

- ▶ This design increases the squeezed surface area of the hose, so lengthening hose working life.

Applicable directives and standards

The pumps of the DL series are manufactured as part of ISO 9001 certified organization and comply with the machine directive and the relevant harmonised CE and NF standards.

Optional equipment

Pulsation damping chamber

Installed on the discharge side of the pump, it cancels out pulsation during pump operation, as well as start-up hammering. It facilitates the installation of instrumentation components and lengthens hose working life.

This means that the pulsation damping chamber is regarded as:

- A process accessory.
- A safety part.

Vacuum pumping

Available from the DL 55 model, this system helps the hose recover its natural shape after it has been squeezed by the rollers.

Hose failure detection

Cuts and cracks in the hose cause the product to leak, and when mixed with the oil in the sump, causes the oil level to rise. The hose failure detection unit is designed to report this anomaly, which can be transmitted remotely via a dry contact.

Oil-level sight glass

Technopolymer

- ▶ Magnifying effect, for easy oil-level checking.

Clamped collar

Zinc or stainless steel

- ▶ Clamp type, ensures perfect leak-tightness while facilitating rapid removal.

Configuration: The rotor/roller/ hose-guide assembly

The PCM Delasco DL series of pumps is equipped with hose-guides in addition to the rollers. The association of rollers and hose-guides combines several advantages: the roller rolls without damaging the hose, the hose-guide increases the squeezed surface area, as well as enabling the roller to act on the hose more gradually. Compared with a conventional peristaltic pump of equivalent flow-rate and pressure, the roller/hose-guide combination lengthens hose life, and requires lower installed power as well as a smaller quantity of oil.

Couplings

Fastening the hose with a clamped collar:

- makes for greater leak-tightness under depression
- facilitates assembly and disassembly. Since the number of parts involved in connection is considerably reduced, the hose changing time is cut back by almost 70%.

Hose material available for all pumps

Temperature hose limit.

HOSES	CONTINUOUS OPERATION > 8 H/DAY	INTERMITTENT OPERATION SEQUENCE 10 – 20 MIN. / HOUR	OCCASIONAL OPERATION, INSTANTANEOUS TEMP. PEAK
Reinforced NR	5 to 40 °C	80 °C	90 °C
Reinforced EPDM	5 to 80 °C	90 °C	100 °C
Reinforced NBR	5 to 60 °C	80 °C	90 °C

Hoses

Everything flows through the machined reinforced rubber hose, and no metal part is in contact with the product. The hose lining has a fundamental role: it assures the integrity of the pumped product during transfer and offers high resistance to abrasives.

The hose is available in three grades: NR (Reinforced Natural Rubber), EPDM (Ethylene Propylene Diene Monomer), and NBR (Butadiene-acrylonitrile rubber).

Applications **DL Series 12.18.25.35.45.55**

DL series pumps are used in many sectors of activity for transferring products such as cement slurry, ceramic slip, fermentation must, liquid soap, and for dosing hydrochloric acid, milk of lime, ammonium sulphate, etc.

They are the ideal solution for applications where the installation conditions and process constraints call for flexibility and robustness:

- **Reversibility.**
- **Seallessness.**
- **Abrasion resistance.**

Manufacturing ceramic decorative ornaments

Pumps supplying
the production line with
ceramic slip.
These DL 55 pumps are
equipped with
the vacuum pumping sys-
tem and the
hose-failure detector.

Manufacturing of pet-food

DL 18 dosing pumps for
colouring agents and aro-
mas installed with negative
suction.

Surface treatment

Surface treatment bath
transfer pump. This DL 25
pump is installed vertically
and equipped with a starter.

The technical advantages of the peristaltic pump mean that it can satisfy a very wide range of applications in a large number of different sectors of activity.

SECTOR OF ACTIVITY	APPLICATION EXAMPLES
Water treatment	<ul style="list-style-type: none"> • Lime milk dosing • Bacteriological sludge transfer • Filter press feed
Paper and board	<ul style="list-style-type: none"> • Coating fluid transfer • Titanium dioxide (TiO₂) transfer • Waste- and solid-bearing water transfer • Glue or resin transfer
Building, civil engineering, quarrying, ceramics industry	<ul style="list-style-type: none"> • Liquid enamel transfer • Slip transfer • Coating transfer • Ooze dragging • Sludge transfer from settling tanks • Cement grout transfer • Glue and emulsion transfer
Agro-food	<ul style="list-style-type: none"> • Wine lees, grape must transfer • Fruit purée transfer • Potato waste transfer • Process sludge transfer • Slaughterhouse wastes/greasy water/offal/blood transfer
Chemistry	<ul style="list-style-type: none"> • Solid-bearing effluent transfer • Liquid chalk transfer • Soda aluminate transfer • Sulphate and oxide transfer
Other industries	<ul style="list-style-type: none"> • Coating product transfer (Foundry) • Bentonite transfer • Nuclear effluent transfer

This table is not exhaustive. It lists the commonest applications. Obviously there are many more in a variety of fields.

PUMPED PRODUCTS

Specific gravity

Maximum specific gravity: 2.
For higher values, please consult us.

Particles

The maximum particle size must not exceed 1/3 of hose inner diameter. Soft particles (whole fruit or fruit segments; meat or fish pieces) can be the same size as the hose diameter.

Dry matter

Dry-matter concentration can be as high as 25% to 60%, depending upon specific gravity. Pump speed should be adjusted so as to avoid wringing solid-bearing liquids, or clogging on the inlet side.

Viscosity

0 to 40 000 centipoises depending on hose diameter and pump rotation speed. For high viscosities, examination of a sample, or a pumping test may sometimes be necessary. Please consult us.

The PCM DELASCO range

The variety of different constructions and of elastomer hoses of the peristaltic pumps in the PCM Delasco range means that they can cover a wide variety of applications calling for versatility and flexibility.

Z SERIES

The peristaltic pump for low pressures.
Flow-rate: up to 18 m³/h
Pressure: up to 1.5 bar.

DSC SERIES

The pump with the reinforced hose for high pressures.
Flow-rate: up to 68 m³/h
Pressure: up to 15 bar.

PMA SERIES

Special low flow-rate pump.
Flow-rate: up to 200 l/h
Pressure: up to 1.5 bar.

DL SERIES

Peristaltic pump combining rollers and hose-guides for longer hose life and better leak-tightness in depression.
Flow-rate: up to 20 m³/h
Pressure: up to 15 bar.

Services

PCM is constantly striving to work closer with its partners by responding to its customers' needs and offering quality service. All the aspects of LCC are taken into account to provide a better quality product and improve performance.

Equipment repair and overhaul...

Speed and efficiency. Our technical assistance staff undertake repairs to pumps and regularly overhaul equipment which is already installed.

Maintenance Contract...

PCM offer maintenance contracts drawn up to suit the requirements and operating conditions of each production unit.

Spare parts...

Unbeatable delivery. PCM hold a permanent stock of spare parts and accessories so that they can respond to all urgent enquiries.

Technical assistance...

PCM recommend that their customers take out a maintenance contract to ensure that their pumps provide optimum performance. PCM's technical assistance staff regularly visit installations to perform preventive or corrective maintenance.

Training...

PCM offer a two-day training course designed to give maintenance personnel a thorough understanding of how to use and maintain positive displacement pumps.

Pumpexpress...

Availability and reactivity. Complete pumps are available for delivery at any time. This new service allows PCM to meet urgent requests for equipment.

PCM's range of products includes:

PCM MOINEAU The widest range of progressive cavity pumps

PCM DELASCO A complete range of adaptable multi-purpose peristaltic pumps

PCM PROCESS Feeding and filling systems

PCM DOSYS Precision dosing and continuous blending systems

PCM PRÉCI-POMPE Electro-mechanical diaphragm and piston dosing pumps

PCM EQUIPEMENT Pipeliner-grinders

PCM MOINEAU OILFIELD Progressive cavity pumps for crude oil extraction
